- Jan 2018 - 1 ETH is \$1000.00
- Nov 2019 - 1 ETH is \$10,000.00

All Time High 2023: \$5,600

It took Bitcoin 2 years to reach **\$10.00** & only 3 years to achieve **\$1,000.00** Over 400,000,000 Users

EXPLAIN BULL RUN

A bull market, or bull run, is defined as a period of time where the majority of investors are buying, demand outweighs supply, market confidence is at a high, and prices are rising. If, in a given market, you see prices quickly trending upwards, this could be a sign that the majority of investors are becoming optimistic or “bullish” about the price increasing further, and may mean that you’re looking at the start of a bull market. Investors who believe that prices will increase over time are known as “bulls.” As investor confidence rises, a positive feedback loop emerges, which tends to draw in further investment, causing prices to continue to rise.

Because the price of a given cryptocurrency is substantially influenced by public confidence in that asset, a strategy some investors use is to try to determine investors’ optimism in a given market (a measure known as “market sentiment”).

HOW BLOCKCHAIN WORKS

A blockchain is “a distributed database that maintains a continuously growing list of ordered records, called blocks.” These blocks “are linked using cryptography. Each block contains a cryptographic hash of the previous block, a timestamp, and transaction data. A blockchain is a decentralized, distributed and public digital ledger that is used to record transactions across many computers so that the record cannot be altered retroactively without the alteration of all subsequent blocks and the consensus of the network.
